

KeySafe (P500) Professional key storage

The most secure mechanical KeySafe on the market today and includes many features that resist physical attacks.

Overview

The KeySafe P500 provides a secure, way to store keys for convenient, on-site access.

For even more security, an alarm sensor is provided for connection to an alarm system.

The KeySafe P500 comes with a full, integrated weather cover, protecting it from ice, snow, water, and dust.

Construction

The KeySafe P500 is made of heavy gauge stainless steel and a thick zinc-alloy shell. Stainless steel reinforcement plates are integrated with the heavy zinc shell to create a triple-wall vault that keeps your keys secure. These triple walls are much more resistant to prying, hammering, chiseling, and drilling than single or double wall construction. A stainless steel plate around the buttons adds additional security and is scratch and fingerprint resistant.

The heavy-duty locking mechanism uses a long-travel bolt that locks the triple walls together making it extremely pry-resistant. A clutch mechanism prevents the handle from being forced open. If the P500 is locked and the handle is turned forcefully, the handle slips and turns easily without opening. Just turn the handle back to the closed position until it clicks to re-latch the handle.

Installation

Four heavy-duty screws and a template are included for mounting. For installation of the alarm sensor please consult with your alarm system provider.

Operation

- Press the "CLEAR" button down to reset the buttons.
- Enter the combination. If you enter an incorrect combination, reset the buttons and re-enter the combination.
- Turn the OPEN handle clockwise 180° to open. When you turn the handle, the combination will clear. There is no need to manually clear the code after closing the KeySafe.
- To relock, close the lid and turn the OPEN handle counter-clockwise 180° back to the locked position.

The KeySafe P500 can be connected to your alarm system as a **Reporting Zone**. Your alarm system will be able to record what time the KeySafe P500 was opened.

The KeySafe P500 can also be connected to your alarm system as an **Alarm Zone**. Your alarm system will activate if the KeySafe is removed from the wall.

Applications

Commercial: Office buildings, remote sites, storage areas, property management, equipment storage, after hours delivery, emergency or on demand access.

Residential: Homes, tool sheds, work shops, for home delivery, cleaning services, emergency access, etc.

Standard Features

- The most secure KeySafe ever!
- Solid metal construction
- Stainless steel security liner
- Easy push button access
- Code tamper protection
- 4,096 possible combination codes
- Store 5+ keys
- Weather cover included
- Mounting hardware included
- Optional use of alarm sensor
